

IMPLEMENTATION OF THE SYSTEM APPROACH IN THE ANALYSIS OF MILITARY-POLITICAL CRISES

Vasil Stankov, PhD.

Abstract: *The article views the system approach as a practical applied tool for analyzing the military-political environment capable of revealing the dynamics of its components and subsystems, as well as their mutual integration and interdependence. Highlighted are the main features defining the military-political environment in crisis areas related primarily to the immediate risks and threats to the security and the interests of the military-political players and a recommendation is made to develop a list of warning indicators which would notify of the emergence and development of a crisis. Then, the article outlines the different types of indicators with an emphasis on the warning ones and identifies the criteria every indicator should meet in order to be an effective analytical tool. Finally, an overview is made of the aspects of the system approach implemented in the analysis of a crisis in the context of the changes inflicted to the features, the scope and the composition of the system of the military-political environment.*

Key words: *approach, analysis, military-political environment, indicators, crisis.*
