

INDICATIVE STRUCTURE OF INDICATORS IN THE PROCESS OF PLANNING OF FIRE MAINTENANCE IN OPERATIONS

Radoslav Chalakov

Abstract: *The purpose of this article is to identify the relationships between the factors influencing fire support planning, performed on the basis of an in-house study with specialists in the field. For the purposes of the study, an expert questionnaire was prepared, using a pre-determined rating scale, and the results were processed with the statistical processing software IBM SPSS 22.*

Key words: *factor analysis, effectiveness, fire support.*
