

CRISIS MANAGEMENT INFORMATION SYSTEMS

Dimo Ginev

Abstract: *This article examines some of the theoretical formulations related to crisis management. Based on the basic requirements for the information systems supporting crisis management, some main problems in the country have been identified and the need to develop and integrate a complete solution for crisis information provision has been emphasized. At the end of the report, several useful technological solutions for information security in crises implemented by different countries around the world have been discussed.*

Key words: *emergency, crisis, disaster, crisis management, information systems.*
