

**THE ROLE OF ENVIRONMENT
IN THE SECURITIZATION PROCESS AND NATIONAL SECURITY**

Ivo Tsekov, PhD.

Abstract: *The modern green movement is rooted in the 1960s, when public attention gradually began to shift toward environmental issues, an economic system that creates them and the overall impact of human activity on nature. This research deals with the current problem of environmental protection and the emergence of green philosophy, green activism and green politics, which are already part of the field of security (the so-called environmental security).*

Key words: *environment, security, securitisation, non-traditional threats.*
